Sub: Half yearly compliance reports

Ref: MOEF New Delhi Environmental Clearance No: 13011/40/2008-IA.II (T) dated 29th September, 2008.

Dear Sir,

Please find enclosed herewith the Six monthly compliance reports for the period October,2015 to March,2016 with respect to our Jindal India Thermal Power Ltd. along with the Monitoring Report, Part-I, Particulars of Greenbelt/ plantation under F( C ) Act 1980 and E(P) Act 1986 and Information on Rehabilitation in the prescribed Format for your kind perusal.

Thanking you,

Yours faithfully, For Jindal India Thermal Power Ltd.

(Vikas Chandra Shukla)

Plant Head

Encl: As above.

# HALF YEARLY COMPLIANCE REPORT

# Period: October, 2015 to March, 16

## JINDAL INDIA THERMAL POWER LTD.

# Ref: MOEF New Delhi Environmental Clearance No: 13011/40/2008-IA.II (T) dated 29th September, 2008

Sl.No.	POINTS	COMPLIANCE STATUS					
İ.	The land requirement for the ash pond, township and water reservoir shall be reduced so as to	We have restricted to construct our project within 950 acres of land.					
	ensure that the total land requirement for the project does not exceed 950 acres. Distance from HFL of Tikra River shall be maintained at least 500m as per siting guidelines.	The plant boundary is in excess of 500m distance from the HFL of Tikira river.					
ii.	Sulphur and ash contents in the coal to be used in the project shall not exceed 0.5% and 40% respectively at any given time.	Coal Block in Talcher Area. Coal in this area has Sulphur content < 0.5% & Ash < 40%.					
iii.	A bi-flue stack of 275 m height shall be provided with continuous online monitoring equipment for SO2, NOx and Particulate. Exit velocity of flue gases shall not be less than 22 m/sec.	A bi-flue stack of 275mtr height with provision of continuous online monitoring equipment for SO2, NOx and particulate matter is provided.  Exit velocity of flue gas is more than 22m/ sec.					
iv.	High efficiency Electrostatic Precipitator (ESPs) shall be installed to ensure that particulate emission does not exceed 50mg/Nm3.	ESP with high efficiency is installed to ensure Particulate Matter (PM) <50mg/NM3. ESP performance guarantee of supplier is attached as Annexure-01.					
<b>V</b> <sub>2.*.2</sub>	Space provision shall be kept for retrofitting of FGD, if required at a later date.	Space for FGD (Flue Gas Desulphurization) is already provided.					
vi.	Adequate dust extraction system such as cyclones/bag filters and ash handling points, transfer areas and other vulnerable dusty areas shall be provided.	Bag filters are installed in all ash handling points, transfer points and vulnerable dust generating points.					
vii.	Fly ash shall be collected in dry	Fly ash is collected in dry form and is being					

	form and storage facility (Silos) shall be provided. 100% fly ash utilization shall be ensured from 3rd year onwards. Utilization fly ash and bottom ash shall be disposed off in the ash pond in conventional slurry mode. Mercury levels along with other heavy metals (Pb, Cr, As etc.) should be monitored in the fly ash/bottom ash, leachates and effluents emanating from the ash pond.	disposed off to ash users, viz, Fly ash bricks tiles and blocks manufacturing units in the region. MOU with cement manufacturing industries is being worked out for supply of fly ash. Part of dry ash is disposed off by low lying area filling. Balance fly ash is sent to Ash Pond through High Concentration Slurry Disposal System (HCSD). Fly ash analysis report for Pb, Cr, As and Hg is attached as Annexure No - 2.  Besides this JITPL is taking action for filling of abandoned mine quarry and for construction of road by fly ash. For this applying for allotment of such type of quarry is in progress.
viii.	The ash pond shall be lined with impervious lining and ash pond embankment towards river should be stone pitched.	Ash pond bottom is lined with HDPE and ston pitching is done in embankment towards river.
ix.	Closed cycle cooling system with cooling towers shall be provided. COC of at least 6 shall be adopted and the effluents shall be treated as per the prescribed norms.	Closed cycle cooling system with IDCT an COC of 7 is being complied. Effluent treatmer plant as per the norms is provided.
x.	The treated effluents conforming to the prescribed standards shall be re- circulated and reused within the plant. There shall be no discharge outside the plant boundary except during monsoon. Arrangements shall be made that effluents and storm water do not get mixed.	The treated effluent is re-circulated and re-use in plant to ensure zero discharge. Storm water drain is made to discharge rainwater without mixing with effluent during summer season.
xi.	A sewage treatment plant shall be provided and the treated sewage shall be used for raising greenbelt/plantation.	A Sewage treatment plant is being constructed and the treated water will be used for raising reenbelt / plantation.
xii.	Rain water harvesting should be adopted. Central Ground water Authority/Board shall be consulted for finalization of appropriate rainwater harvesting	In consultation with CGWA, rainwater harvesting structure is constructed at different locations.

41		
	technology within a period of three months from the date of clearance and details shall be furnished.	
xiii.	Adequate safety measures shall be provided in the plant area to check/minimize spontaneous fires in coal yard, especially during summer season. Copy of these measures with full details along with location plant layout shall be submitted to the Ministry as well as to the Regional Office of the Ministry at Bhubaneswar.	All safety measures are taken care to minimize spontaneous fires in coal yard by provided high pressure fire hydrant line. The details are given is <b>Annexure – 03.</b>
xiv.	Storage facilities for axillary liquid fuel such as LDO and/ HFO/LSHS shall be made in the plant area where risk is minimum to the storage facilities. On site and off site Disaster Management Plans	Storage facilities for axillary liquid fuel such as LDO/HFO/LSHS are made. On site Emergency Plan is submitted earlier as <b>Annexure - 04</b> .  0.5% Sulphur content in the liquid fuel is ensured.
Đ	shall be prepared to meet any eventually in case of an accident taking place. Mock drills shall be conducted regularly and based on the same, modifications required, if any shall be incorporated in the DMP. Sulphur content in the liquid fuel will not exceed 0.5%.	ensured.
XV.	Regular monitoring of ground water in and around the ash pond area shall be carried out, records maintained and six monthly reports shall be furnished to the Regional Office of this Ministry.	It is maintained.
xvi.	A green belt of adequate width and density shall be developed around the plant periphery covering an area of at least 310 acres preferably with local species.	Green belt development is being carried out. We have made our own nursery with local varieties species of 100000 seedlings capacity. Till date, we have planted 227266 local varieties of plants with spacing 2M x 2M within the factory premises at its boundary, township, ash pond and labour hutment area. Details of plantation is
xvii.	Adequate funds shall be allocated for undertaking CSR activities. Details of activities shall also be submitted to the Regional Office of the Ministry, SPCB and the Ministry.	attached as Annexure - 05 (A) & 05 (B)  An adequate fund is allocated for undertaking CSR activities which include education, health, sports, communication, drinking water supply, electrification, cultural activities etc. Details of activities are attached as Annexure -06.

xviii.	First aid and sanitation arrangements shall be made for the drivers and other contract workers during construction phase.	One First Aid Centre is functioning with two qualified doctor and three Pharmacists round the clock at site. First aid boxes with required medicines are also provided at different high risky points. Sanitation facilities at site are provided to the drivers and contract workers.
xix.	Leq of Noise levels emanating from turbines shall be limited to 75 dB (A). For people working in the high noise area, requisite personal protective equipment like earplugs/ear muffs etc. shall be provided. Workers engaged in noisy areas such as turbine area, air compressors etc shall be periodically examined to maintain audiometric record and for treatment for any hearing loss including shifting to nonnoisy/less noisy areas.	Necessary precautions are taken care to control noise level. Ear plugs and ear muffs are supplied to the workers working in high noisy area as a precautionary measures. Periodically audiometric test will be performed to the workers working in those areas. The noise level data of different areas are attached as Annexure-07.
xx.	Regular monitoring of ground level concentration of SO2, NOx, SPM,RSPM and mercury shall be carried out in the impact zone and records maintained. If at any stage these levels are found to exceed the prescribed limits, necessary control measures shall be provided immediately. The location of the monitoring stations and frequency of monitoring shall be decided in consultation with SPCB. Periodic reports shall be submitted to the Regional Office of this Ministry.	In consultation with SPCB officials we have selected four online ambient air quality monitoring stations at site. The monitoring results are attached as Annexure - 08.
xxi.	Provision shall be made for the housing of construction labour within the site with all necessary infrastructure and facilities such as fuel for cooking, mobile toilets, mobile STP, safe drinking water, medical health care, creche etc. The housing may be in the form of temporary structure to be removed after the completion of the project.	All arrangements are provided at site by the company.
xxii.	The project proponent shall advertise in at least two local newspapers widely circulated in	It was maintained.

xxiii.	the region around the project, one of which shall be in the vernacular language of the locality concerned within seven days from the date of this clearance and copies of clearance letter are available with the State Pollution Control Board/Committee and may also be seen at Website of the Ministry of Environment and Forests at http://envfor.nic.in.  A separate environmental management cell with qualified staff shall be set up for	formed and headed by one Senior Executive (Environment).The details of EMC is attached as
	implementation of stipulated environmental safeguards.	Annexure No-9.
xxiv.	Half yearly report on the status of implementation of the stipulated conditions and environmental safeguards shall be submitted to this Ministry/ Regional Office/CPCB/SPCB.	It is being complied.
xxv.	Regional Office of the Ministry of Environment & Forests located at Bhubaneswar will monitor the implementation of the stipulated conditions. A complete set of documents including Environmental Impact Assessment Report and Environment Management Plan along with the additional information submitted from time to time shall be forwarded to the Regional Office for their use during monitoring.	
xxvi.	Separate funds shall be allocated for implementation of environmental protection measures along with item wise break up. These cost shall be included as part of the project cost. The funds earmarked for the environment protection measures shall not be diverted for other purposes and year-wise expenditure should be	Separate funds are allocated for implementation of environmental protection measures. The item wise break up is attached as <b>Annexure No-10</b> .

	reported to the Ministry.	
xxvii.	The project authorities shall inform the Regional Office as well as the Ministry regarding the date of financial closure and final approval of the project by the concerned authorities and the dates of start of land development work and	
xxviii.	commissioning of plant.  Full co-operation shall be extended to the Scientists/Officers from the Ministry / Regional Office of the Ministry at Bhubaneswar/ the CPCB/ the SPCB who would be monitored the compliance of environmental status.	_

6. Salient features

### a. Of the project

The land identified for the proposed project is mostly barren uncultivable wasteland and partly rain fed single crop agricultural land, comprising of 25% of Government land and 75% of private land. There are no streams or nallahs in the project site. The land in elevation of about 105m a MSL.

The mean maximum & minimum ambient temperature in the area as per IMD Angul are recorded to be 40.9 degree centigrade (May) and 14.7 degree centigrade (December) respectively. The relative humidity varies from 66% to 80% at 0830hr and from 38% to 79% at 1730hr. The average annual rainfall in the region is about 1450.8mm. Seismically, the site falls under seismic zone-II, which indicates that the area is seismically stable.

b. Of the environmental management plans

Environmental Management Plan forms an integral part of the proposed project activities from design to operational stage to minimize the adverse impacts. The fugitive dust emissions due to coal fines from the stock pile of raw materials and fines dump in the open area is being controlled by dust system of routine water suppression sprinkling. Power plant is being equipped with integral pollution control system. The gases & fly ash leaving chimney is passed through a series of pollution control equipments like ESP. Bag filters is provided for control of fugitive emission in coal transfer point in conveyor belts and in fly ash transfer point at Silo. Noise level in the Core and Buffer Zone is maintained within the statutory norms for the betterment of working personnel. Various steps is proposed at the design stage to recycle and reuse of the process effluent aiming zero discharge. The solid waste is dumped in a planned manner in layers with a layer of soil in between, and after thorough compaction, plantation will be raised over the solid waste dump. The green belt is developed along the boundary, in the vacant areas, around office building etc. of project site. An Environmental Management Cell is constituted for EMP implementation and monitoring purpose.

# JINDAL INDIA THERMAL POWER LIMITED, DERANG SAFETY MEASURES IN COAL STOCK YARD.

It is a common phenomenon in coal stock to catch fire automatically by auto ignition without any application of external ignition source. Chance of fire is more in summer season. To prevent such incident of fire and also dust emission we have installed some fixed installation and have been taking following steps continuously.

- 1. Stock heap/height is restricted to 2 m.
- 2. We are storing in segregation manner. There is space of 2 m between every two heaps.
- 3. As per TAC standard we have installed our fire hydrant network (reservoir, pump house, hydrants, monitors, sprinklers, risers, sprayers, etc.) throughout the plant including coal yard.
- 4. Whole coal yard is covered with fire hydrant lines on both sides. Each side is having three single headed hydrants and three monitors which are charged round the clock. These installations cover the whole area in case of any fire. In case of power failure we have diesel pumps in pump house to meet the exigency.
- 5. Monitors without any external addition when operated cover the whole area. Firefighting delivery hoses with branches and nozzles are kept in the coal yard which can be operated from hydrants. The yard is manned round the clock who keeps vigil and attend the fire or smoke with this system.
- 6. Besides hydrant system we have water spraying arrangement in the area. During summer we spray water on the coal heap at regular intervals so that it will not attain the auto ignition temperature.
- 7. Earthmoving equipment like loaders, JCB and poclain machines are available always which can dig/segregate the pile in case of any fire.
- 8. We have our Fire Service section with two fire tenders/pumps, crew members, firefighting and rescue equipment which visit the yard regularly and take immediate steps to extinguish the fire if any.
